DRS2000® Dual Razor Slitter

Dual Razor Slitter

Parkinson's new Dual Razor Slitter offers a low maintenance, cost-effective slitting solution. The DRS 2000® features, "tool-less" blade changes and offers uninterrupted slitting, which provides the capability to extend a spare razor blade into the web without affecting an active cut or altering its location. The razor blades are mounted in sliding cartridges that are easily and safely removed from the unit for blade replacement while the alternate blade is in operation. An additional safety guard, mounted behind the web, can be custom designed for your specific web handling application, to prevent contact with the cutting edges of the blades while extended through the web.

Standard Capabilities & Available Options

- Operator is protected from blade during machine operation
- The design is lower profile and more compact than other Parkinson-brand slitters
- Blade can be changed without interrupting the slitting process
- Blade is removed easily without the use of tools
- Blades are securely held in place once inserted into position
- Adjustable stroke
- Mounts on standard dovetail bar, retrofits onto non-Parkinson-brand winders
- Can make slits as narrow as 1.5 inches

Ease Of Use & Low-Cost
Does Not Supercede The
Necessary Safety Features Of
This New Slitter.
